VPDES PERMIT FACT SHEET

This document gives pertinent information concerning the **reissuance** of the VPDES permit listed below. This permit is being processed as a **Minor, Municipal** permit. The effluent limitations contained in this permit will maintain the Water Quality Standards of 9 VAC 25-260-00 et.seq. The treatment facilities consist of: grease trap, two septic tanks, recirculating sand filter, and tablet chlorinator, with discharge to holding pond (used to irrigate golf course) and then to Sinking Creek. This permit action consists of limiting pH, BOD_5, suspended solids, and total residual chlorine; and including other requirements and special conditions.

SIC Code: 4952

001	Olde Farm Golf Club WWTP	See Page 1 above, first paragraph	0.005 MGD

(1) List operations contributing to flow (2) List treatment units
(3) Design flow

10. Sewage Sludge Use or Disposal: Sludge is periodically pumped from the septic tanks and shipped to the Wolf Creek Water Reclamation Facility (formerly the Town of Abingdon WWTP).

11. Discharge Location Description: See attached Quadrangle; Number: 025B, Wyndale, VA

12. Material Storage: None reported

13. Ambient Water Quality Information: None

14. Antidegradation Review & Comments: Tier I (X) Tier II Tier III

The State Water Control Board's Water Quality Standards includes an antidegradation policy (9 VAC 25-260-30). All state surface waters are provided one of three levels of antidegradation protection. For Tier 1 or existing use protection, existing uses of the water body and the water quality to protect these uses must be maintained. Tier 2 water bodies have water quality that is better than the water quality standards. Significant lowering of the water quality of Tier 2 waters is not allowed without an evaluation of the economic and social impacts. Tier 3 water bodies are exceptional waters and are so designated by regulatory amendment. The antidegradation policy prohibits new or expanded discharges into exceptional waters. The antidegradation review begins with a Tier determination. The receiving stream is Tier I, since the original effluent limitations for the 0.005 MGD facility were based on stream standards.

15. Site Inspection: Technical Inspection on September 7, 2005 by Danny L. Petty.

16. Effluent Screening & Limitations Development: The wastewater treatment plant is designed to discharge into a pond used as the source of irrigation water for the golf course. The pond may at times discharge into Sinking Creek. Due to the complexity of the hydraulics, this discharge can not be easily modeled. The dilution ratio (7Q10 Sinking

17. Creek/WWTP discharge) is 272/1 and the pond has a volume of 2.777 million gallons. Considering the large dilution ratio and the additional dilution and treatment provided by the pond, it is the best professional judgment of DEQ staff that standard secondary treatment limits for BOD_5 and TSS (30/30 mg/l) and total residual chlorine limits of 1.0 mg/l (monthly average) and 3.0 mg/l (weekly average) are adequate to protect water quality. It is also the best professional judgement of DEQ staff that nutrient limits are not needed for the effluent.

The staff has considered the nutrient value of the irrigation water in the pond after the addition of the sewage effluent. Since the wastewater has a large dilution in the pond, and since the water needed for irrigation will be very large in relation to the design flow if the STP, the staff feels that no special requirements are needed in the permit to control the land application of the wastewater.

On January 15, 2003, new bacteria standards in 9 VAC 25-260-170.A became effective, as did the revised disinfection policy of 9 VAC 25-260-170.B. These standards replaced the existing fecal coliform standard and disinfection policy of 9 VAC 25-160-170. E.coli (fresh water) and enterococci (saltwater and transition zone) criteria replaced the existing fecal coliform criteria. Since this facility disinfects with chlorine, the previous permit included fecal coliform limits which were applicable only if alternate disinfection was used. In accordance with the agency guidance for the new standards, permittees which use chlorine may perform a study to demonstrate that chlorine limits can be used as a surrogate for bacteria limits in a permit for an individual discharge. However, several surrogate studies have been completed state-wide of facilities with a wide range of design flows and treatment schemes and all the facilities have passed the criteria for using chlorine as a surrogate for E.coli testing. Therefore, surrogate testing is not being required in this permit.

Basis for Effluent Limitations:

PARAMETER	BASIS FOR LIMITS	DISCHARGE LIMITS				MONITORING REQUIREMENTS	
		MONTHLY AVERAGE	WEEKLY AVERAGE	MINIMUM	MAXIMUM	FREQUENCY	SAMPLE TYPE
Flow	NA	NL	NA	NA	NL	1/Day	Estimate**
PH	2	NA	NA	6.0 SU	9.0 SU	1/Day	Grab
BOD_5	3,4	30 mg/l 0.6 kg/d	45 mg/l 0.9 kg/d	NA	NA	1/Month	Grab
Total Suspended Solids	1	30 mg/l 0.6 kg/d	45 mg/l 0.9 kg/d	NA	NA	1/Month	Grab
Total Residual Chlorine ***	3,4	1.0 mg/l	3.0 mg/l	NA	NA	1/Day	Grab

*1. Federal Effluent guidelines
2. Water Quality-based Limits:
3. Best Engineering Judgement
4. Best Professional Judgement
5. Other (e.g. wasteload allocation model)

** Estimated average daily flowrate shall be based on the most accurate method or device available such as: weir, potable water meter, pump rates, etc....

***Additional TRC Limitations and Monitoring Requirements (PART I.B. of Permit)

1. No more than three (3) of all samples for TRC taken at the outlet of the chlorine contact tank shall be less than 1.0 mg/l for any one calendar month.

2. No TRC sample collected after the chlorine contact shall be less than 0.6 mg/l.

3. If an alternative to chlorination as a disinfection method is chosen, the E.coli parameter shall be limited and monitored by the permittee as specified below:

	Discharge Limitations		Monitoring Requirements	
	Monthly Avg.	Weekly Avg.	Frequency	Sample Type
E.coli (N/100ml)	126*	NA	1/Week**	Grab

* Geometric Mean
** Between 10:00 a.m. and 4:00 p.m.

17. Basis for Sludge Use & Disposal Requirements : The VPDES Permit Regulation (9 VAC 25-31-10 et seq.), adopted by the State Water Control Board May 22, 1996, became effective on July 24, 1996. Among other program changes, the newly adopted regulation incorporated technical standards for the use or disposal of sewage sludge.

18. Antibacksliding Statement: Since no effluent limitations are being relaxed in this reissuance, the antibacksliding provisions of the Permit Regulation (9 VAC 25-31-220.1) do not apply.

19. Compliance Schedule: NA

20. Special Conditions:

PART I.B. Special Condition - Additional TRC Limitations and Monitoring Requirements
Rationale: Required by Sewage Control and Treatment Regulations, 9 VAC 25-790, and Virginia Water Quality Standards, 9 VAC 25-260-170, bacteria; other waters. Also, 40 CFR 122.41(e) requires the permittee, at all times, to properly operate and maintain all facilities and systems of treatment in order to comply with the permit. This ensures proper operation of chlorination equipment to maintain adequate disinfection.

PART I.C. Special Condition - Compliance Reporting Under Part I.A.
Rationale: Authorized by VPDES Permit Regulation, 9 VAC 25-31-190 J 4 and 220 I. This condition is necessary when toxic pollutants are monitored by the permittee and a maximum level of quantification and/or a specific analytical method is required in order to assess compliance with a permit limit or to compare effluent quality with a numeric criterion. The condition also establishes protocols for calculation of reported values.

PART I.D. Other Requirements and Special Conditions

1. **Treatment Plant Flows**
Rationale: Required by VPDES Permit Regulation, 9 VAC 25-31-200 B.2. for all POTW and PVOTW permits.

2. **Indirect Dischargers**
Rationale: Required by VPDES Permit Regulation, 9 VAC 25-31-200 B.1. for POTWs and PVOTWs that receive waste from someone other than the owner of the treatment works.

3. **CTC, CTO Requirement**
Rationale: Required by the Code of Virginia § 62.1-44.19: Sewage Collection and Treatment Regulations, 9 VAC 25-790.

4. **O&M Manual Requirement**
Rationale: Required by VPDES Permit Regulation, 9 VAC 25-31-190 E.

5. **Licensed Operator Requirement**
Rationale: The VPDES Permit Regulation, 9 VAC 25-31-200 D. and The Code of Virginia § 54.1-2300 et seq, Rules and Regulations for Waterworks and Wastewater Works Operators (18 VAC 160-20-10 et seq.), requires licensure of operators.

6. **Reliability Class**
Rationale: Required by Sewerage Regulations, 9 VAC 25-60-20 and 40 for all municipal facilities.

7. **Treatment Works Closure Plan**
Rationale: State Water Control Law § 62.1-44.19. This condition is used to notify the owner of the need for a closure plan where a treatment works is being replaced or is expected to close.

8. **Total Maximum Daily Load (TMDL) Reopener**
Rationale: Section 303(d) of the Clean Water Act requires the total maximum daily loads (TMDLs) be developed for streams listed as impaired. This special condition is to allow the permit to be reopened if necessary to bring it in compliance with any applicable TMDL approved for the receiving stream. The reopener recognizes that, according to Section 402(o)(1)of the Clean Water Act, limits and/or conditions may be either more or less stringent than those contained in the permit. Specifically, they can be relaxed if they are the result of a TMDL, basin plan, or other wasteload allocation prepared under Section 303 of the Act.

10. **Sludge Reopener**
Rationale: Required by VPDES Permit Regulation, 9 VAC 25-31-220C.4. for all permits issued to treatment works treating domestic sewage.

13. **Sludge Use and Disposal**
Rationale (9-11): VPDES Permit Regulation, 9 VAC 25-31-100 P; 220 B 2; and 420 through 720, and 40 CFR Part 503 require all treatment works treating domestic sewage to submit information on sludge use and disposal practices and to meet specified standards for sludge use and disposal.

Technical requirements may be derived from the Department of Health's Biosolids Use Regulations, 12 VAC 5-585-10 et seq.

PART II, Conditions Applicable to All Permits
Rationale: VPDES Permit Regulation, 9 VAC 25-31-190 requires all VPDES permits to contain or specifically cite the conditions listed.

21. Changes from the previous permit contained in the reissuance permit:

The language in the Other Requirements and Special Conditions has been updated.

Reduced Monitoring: Due to the stringent reliability class and close human contact (pond water used for irrigation of golf course) and due to the fact that the monitoring frequencies are already minimal, reduced monitoring, under EPA's Interim Guidance for Performance Based Reductions of NPDES Permit Monitoring Frequencies, has not been considered.

22. Variances/Alternate Limits or Conditions: None

23. Regulation of Users: 9 VAC 25-31-280 B 9 - NA

24. Public Notice Information required by 9 VAC 25-31-280 B:

HOW TO COMMENT AND/OR REQUEST A PUBLIC HEARING: DEQ accepts comments and requests for public hearing by e-mail, fax or postal mail. All comments and requests must be in writing and be received by DEQ during the comment period. Submittals must include the names, mailing addresses and telephone numbers of the commenter/requester and of all the persons represented by the commenter/requester. A request for a public hearing must also include; 1) The reason why a public hearing is requested. 2) A brief, informal statement regarding the nature and extent of the requester or of those represented by the requester, including how and to what extent such interest would be directly and adversely affected by the permit. 3) Specific references, where possible, to terms and conditions of the permit and suggested revisions. DEQ may hold a public hearing, including another comment period, if public response is significant and there are substantial, disputed issues relevant to the permit.

CONTACT FOR PUBLIC COMMENTS, DOCUMENT REQUESTS AND ADDITIONAL INFORMATION:
Name: Fred M. Wyatt
Address: DEQ, Southwest Regional Office, P.O. Box 1688, 355 Deadmore Street, Abingdon, Virginia, 24212- 1688 Phone: (276) 676-4810 E-mail: fmwyatt@deq.virginia.gov Fax: (276) 676-4899

Following the comment period, the Board will make a determination regarding the proposed ***reissuance***. This determination will become effective, unless the DEQ grants a public hearing. Due notice of any public hearing will be given.

25. Additional Comments:

Previous Board Action: None

Staff Comments:

According to the attached printout from the Virginia Fish and Wildlife Information Service, no threatened or endangered species have been identified within a two mile radius of the discharge.

Public Comments:

26. TMDL: NA

SUBJECT: Flow Frequency Determination
The Farm Golf Course – #VA0090182

RECEIVED
FEB 26 1999
DEQ-SWRO

TO: Fred Wyatt, SWRO

FROM: Paul E. Herman, P.E., WQAP

DATE: February 25, 1999

COPIES: Ron Gregory, Charles Martin, Eugene Pc ll, File

The Farm Golf Course discharges to the Sinking Creek near Bristol, Virginia. Flow frequencies are required at this site for use by the permit writer in developing the VPDES permit.

The VDEQ conducted several flow measurements on the Sinking Creek from 1993 to 1998. The measurements were made approximately 2.0 miles upstream of the discharge point. The measurements were correlated with the same day daily mean values from the continuous record gage on the Beaver Creek at Bristol, VA #03478400. The measurements and daily mean values were plotted on a logarithmic graph and a best fit line was drawn through the data points. The required flow frequencies from the reference gage were plotted on the regression line and the associated flow frequencies at the measurement site were determined from the graph. The flow frequencies for the measurement site were projected to the discharge point using proportional drainage areas. The data for the reference gage, the measurement site, and the discharge point are presented below.

Beaver Creek at Bristol, VA (#03478400):

Drainage Area = 27.7 mi^2

1Q10 = 8.1 cfs	High Flow 1Q10 = 11 cfs
7Q10 = 8.7 cfs	High Flow 7Q10 = 13 cfs
30Q5 = 10 cfs	HM = 22 cfs

Sinking Creek near Highlander Park, VA (#03476508.5):

Drainage Area = 0.59 mi^2

1Q10 = 0.34 cfs	High Flow 1Q10 = 0.50 cfs
7Q10 = 0.36 cfs	High Flow 7Q10 = 0.60 cfs
30Q5 = 0.43 cfs	HM = 1.1 cfs

Sinking Creek at the Farm Golf Course discharge point:

Drainage Area = 3.46 mi^2

1Q10 = 2.0 cfs	High Flow 1Q10 = 2.9 cfs
7Q10 = 2.1 cfs	High Flow 7Q10 = 3.5 cfs
30Q5 = 2.5 cfs	HM = 6.5 cfs

The high flow months are January through May. This analysis does not address the discharge from the Greenbriar Estates located upstream of the Farm Golf Course discharge. This analysis assumes there are no other discharges, withdrawals, or springs influencing the flow in the Sinking Creek between the discharge point and the measurement site.

If you have any questions concerning this analysis, please let me know.

Re: DEQ VPDES VA0090182, The Old Farm Golf Club

Dear Mr. Wyatt:

The Department of Conservation and Recreation's Division of Natural Heritage (DCR) has searched its Biotics Data System for occurrences of natural heritage resources from the area outlined on the submitted map. Natural heritage resources are defined as the habitat of rare, threatened, or endangered plant and animal species, unique or exemplary natural communities, and significant geologic formations.

This project has been sent to the Virginia Karst Program and to the Virginia Speleological Survey for review for documented sensitive karst features and caves. According to information currently in our files, this existing wastewater treatment plant discharges its treated effluent into a pond, which is in turn used as a source for irrigation water for a golf course. Soils are comparatively thin in Halls Bottom in the vicinity of the project as a result of the highly developed karst topography. There is a possibility that contaminants are being introduced into the local karst aquifer by the practice of irrigating with this treated wastewater. More problematic is the occasional overflow of the treated effluent from the holding pond directly into Sinking Creek. The entire flow of Sinking Creek sinks underground as it enters Halls Bottom #1 Cave (also known as Latham's Cave) and flows along an underground path before emerging at Preston Spring 1750 feet southwest from the point where the stream sinks (see attached map documenting results from a dye trace performed ca. 1975).

While the DCR Karst Program does not oppose the reissuance of the wastewater discharge permit for this existing facility, it recognizes that a superior alternative would be to design and redevelop the Old Farm Golf Club wastewater collection system to accommodate an eventual connection to the Washington County Service Authority's (WCSA) centralized wastewater treatment infrastructure. Note that a project by the WCSA to construct wastewater interceptors and pump stations is currently being planned less that one mile northwest from the subject site. Utilizing the WCSA central public sewer system rather than continuing to operate this small centralized community system would serve to better protect the area's karst groundwater resources and would also reduce the nutrient levels in Sinking Creek.

In karst areas such as those found in much of Washington County, in terms of protecting karst groundwater quality, a well designed central public sewer system that discharges the treated effluent into

a major regional surface stream is generally a superior alternative for treating wastewater from housing developments than is onsite treatment by residential septic systems or by small centralized community systems (such as the one utilized at The Old Farm Golf Club) that discharge treated effluent indirectly or sometimes directly into karst aquifers and/or small streams.

If new karst features are encountered during the reissuance of this permit, please coordinate with Wil Orndorff (540-394-2552, Wil.Orndorff@dcr.virginia.gov) to document and minimize adverse impacts.

Under a Memorandum of Agreement established between the Virginia Department of Agriculture and Consumer Services (VDACS) and DCR represents VDACS in comments regarding potential impacts on state-listed threatened and endangered plant and insect species. The current activity will not affect any documented state-listed plants or insects.

Our files do not indicate the presence of any State Natural Area Preserves under DCR's jurisdiction in the project vicinity.

New and updated information is continually added to Biotics. Please contact DCR for an update on this natural heritage information if a significant amount of time passes before it is utilized.

The Virginia Department of Game and Inland Fisheries maintains a database of wildlife locations, including threatened and endangered species, trout streams, and anadromous fish waters, that may contain information not documented in this letter. Their database may be accessed from http://vafwis.org/fwis/ or contact Shirl Dressler at (804) 367-6913.

Should you have any questions or concerns, feel free to contact me at 804-371-2708. Thank you for the opportunity to comment on this project.

Sincerely,

S. Rene' Hypes

Thank you for submitting your project to DCR Natural Heritage. Attached is an overview of the results and potential conflicts.

L. Preston Bryant, Jr
Secretary of Natural Resources

Joseph H. Maroon
Director

COMMONWEALTH of VIRGINIA

DEPARTMENT OF CONSERVATION AND RECREATION

The project mapped as part of this report has been searched against the Department of Conservation and Recreation's Biotics Data System for occurrences of natural heritage resources from the area indicated for this project. Natural heritage resources are defined as the habitat of rare, threatened, or endangered plant and animal species, unique or exemplary natural communities, and significant geologic formations.

According to the information currently in Biotics files, NATURAL HERITAGE RESOURCES HAVE BEEN DOCUMENTED within two miles of the indicated project boundaries.

You have submitted this project to DCR for a more detailed review for potential impacts to natural heritage resources. DCR will review the submitted project to identify the specific natural heritage resources in the vicinity of the proposed project. Using the expertise of our biologists, DCR will evaluate whether your specific project is likely to impact these resources, and if so how. DCR's response will indicate whether any negative impacts are likely and, if so, make recommendations to avoid, minimize and/or mitigate these impacts. If the potential negative impacts are to species that are state- or federally-listed as threatened or endangered, DCR will also recommend coordination with the appropriate regulatory agencies: the Virginia Department of Game and Inland Fisheries for state-listed animals, the Virginia Department of Agriculture and Consumer Services for state-listed plants and insects, and the United States Fish and Wildlife Service for federally listed plants and animals. If your project is expected to have positive impacts we will report those to you with recommendations for enhancing these benefits.

Please allow up to 30 days for a response.

We will review the project based on the information you included in the Project Info submittal form, which is included in the report that follows. Often additional information can help us make a more accurate and detailed assessment of a project's potential impacts to natural heritage resources. If you have additional information that you believe will help us better assess your project's potential impacts, you may send that information to us. Please refer to the project Title (from the first page of this report) and include this pdf file with any additional information you send us.

Thank you for submitting your project for review to the Virginia Natural Heritage Program through the NH Data Explorer. Should you have any questions or concerns about DCR, the Data Explorer, or this report, please contact the Natural Heritage Project Review Unit at 804-371-2708.

Revised 2/2003

State "Transmittal Checklist" to Assist in Targeting Municipal and Industrial Individual NPDES Draft Permits for Review

Part I. State Draft Permit Submission Checklist

In accordance with the MOA established between the Commonwealth of Virginia and the United States Environmental Protection Agency, Region III, the Commonwealth submits the following draft National Pollutant Discharge Elimination System (NPDES) permit for Agency review and concurrence.

Facility Name: The Olde Farm Golf Club WWTP

NPDES Permit Number: VA0090182

Permit Writer Name: Fred M. Wyatt

Date: January 28, 2009

Major [ ] **Minor** [X] **Industrial** [ ] **Municipal** [X]

I.A. Draft Permit Package Submittal Includes:	**Yes**	**No**	**N/A**
1. Permit Application?	X		
2. Complete Draft Permit (for renewal or first time permit – entire permit, including boilerplate information)?	X		
3. Copy of Public Notice?		X	
4. Complete Fact Sheet?	X		
5. A Priority Pollutant Screening to determine parameters of concern?		X	
6. A Reasonable Potential analysis showing calculated WQBELs?		X	
7. Dissolved Oxygen calculations?		X	
8. Whole Effluent Toxicity Test summary and analysis?			X
9. Permit Rating Sheet for new or modified industrial facilities?			X

I.B. Permit/Facility Characteristics	**Yes**	**No**	**N/A**
1. Is this a new, or currently unpermitted facility?		X	
2. Are all permissible outfalls (including combined sewer overflow points, non-process water and storm water) from the facility properly identified and authorized in the permit?	X		
3. Does the fact sheet **or** permit contain a description of the wastewater treatment process?	X		

I.B. Permit/Facility Characteristics – cont.	Yes	No	N/A
4. Does the review of PCS/DMR data for at least the last 3 years indicate significant non-compliance with the existing permit?		X	
5. Has there been any change in streamflow characteristics since the last permit was developed?		X	
6. Does the permit allow the discharge of new or increased loadings of any pollutants?		X	
7. Does the fact sheet **or** permit provide a description of the receiving water body(s) to which the facility discharges, including information on low/critical flow conditions and designated/existing uses?	X		
8. Does the facility discharge to a 303(d) listed water?		X	
a. Has a TMDL been developed and approved by EPA for the impaired water?			X
b. Does the record indicate that the TMDL development is on the State priority list and will most likely be developed within the life of the permit?			X
c. Does the facility discharge a pollutant of concern identified in the TMDL or 303(d) listed water?			X
9. Have any limits been removed, or are any limits less stringent, than those in the current permit?		X	
10. Does the permit authorize discharges of storm water?		X	
11. Has the facility substantially enlarged or altered its operation or substantially increased its flow or production?		X	
12. Are there any production-based, technology-based effluent limits in the permit?		X	
13. Do any water quality-based effluent limit calculations differ from the State's standard policies or procedures?		X	
14. Are any WQBELs based on an interpretation of narrative criteria?		X	
15. Does the permit incorporate any variances or other exceptions to the State's standards or regulations?		X	
16. Does the permit contain a compliance schedule for any limit or condition?		X	
17. Is there a potential impact to endangered/threatened species or their habitat by the facility's discharge(s)?		X	
18. Have impacts from the discharge(s) at downstream potable water supplies been evaluated?	X		
19. Is there any indication that there is significant public interest in the permit action proposed for this facility?		X	
20. Have previous permit, application, and fact sheet been examined?	X		

Part II. NPDES Draft Permit Checklist

Region III NPDES Permit Quality Checklist – for POTWs

(To be completed and included in the record only for POTWs)

II.A. Permit Cover Page/Administration	Yes	No	N/A
1. Does the fact sheet or permit describe the physical location of the facility, including latitude and longitude (not necessarily on permit cover page)?	X		
2. Does the permit contain specific authorization-to-discharge information (from where to where, by whom)?	X		

II.B. Effluent Limits – General Elements	Yes	No	N/A
1. Does the fact sheet describe the basis of final limits in the permit (e.g., that a comparison of technology and water quality-based limits was performed, and the most stringent limit selected)?		X	
2. Does the fact sheet discuss whether "antibacksliding" provisions were met for any limits that are less stringent than those in the previous NPDES permit?			X

II.C. Technology-Based Effluent Limits (POTWs)	Yes	No	N/A
1. Does the permit contain numeric limits for ALL of the following: BOD (or alternative, e.g., CBOD, COD, TOC), TSS, and pH?	X		
2. Does the permit require at least 85% removal for BOD (or BOD alternative) and TSS (or 65% for equivalent to secondary) consistent with 40 CFR Part 133?	X		
a. If no, does the record indicate that application of WQBELs, or some other means, results in more stringent requirements than 85% removal or that an exception consistent with 40 CFR 133.103 has been approved?			X
3. Are technology-based permit limits expressed in the appropriate units of measure (e.g., concentration, mass, SU)?	X		
4. Are permit limits for BOD and TSS expressed in terms of both long term (e.g., average monthly) and short term (e.g., average weekly) limits?	X		
5. Are any concentration limitations in the permit less stringent than the secondary treatment requirements (30 mg/l BOD5 and TSS for a 30-day average and 45 mg/l BOD5 and TSS for a 7-day average)?		X	
a. If yes, does the record provide a justification (e.g., waste stabilization pond, trickling filter, etc.) for the alternate limitations?			X

II.D. Water Quality-Based Effluent Limits	Yes	No	N/A
1. Does the permit include appropriate limitations consistent with 40 CFR 122.44(d) covering State narrative and numeric criteria for water quality?	X		
2. Does the fact sheet indicate that any WQBELs were derived from a completed and EPA approved TMDL?			X

II.D. Water Quality-Based Effluent Limits – cont.	Yes	No	N/A
3. Does the fact sheet provide effluent characteristics for each outfall?	X		
4. Does the fact sheet document that a "reasonable potential" evaluation was performed?		X	
a. If yes, does the fact sheet indicate that the "reasonable potential" evaluation was performed in accordance with the State's approved procedures?			X
b. Does the fact sheet describe the basis for allowing or disallowing in-stream dilution or a mixing zone?			X
c. Does the fact sheet present WLA calculation procedures for all pollutants that were found to have "reasonable potential"?			X
d. Does the fact sheet indicate that the "reasonable potential" and WLA calculations accounted for contributions from upstream sources (i.e., do calculations include ambient/background concentrations)?			X
e. Does the permit contain numeric effluent limits for all pollutants for which "reasonable potential" was determined?			X
5. Are all final WQBELs in the permit consistent with the justification and/or documentation provided in the fact sheet?			X
6. For all final WQBELs, are BOTH long-term AND short-term effluent limits established?	X		
7. Are WQBELs expressed in the permit using appropriate units of measure (e.g., mass, concentration)?	X		
8. Does the record indicate that an "antidegradation" review was performed in accordance with the State's approved antidegradation policy?	X		

II.E. Monitoring and Reporting Requirements	Yes	No	N/A
1. Does the permit require at least annual monitoring for all limited parameters and other monitoring as required by State and Federal regulations?	X		
a. If no, does the fact sheet indicate that the facility applied for and was granted a monitoring waiver, AND, does the permit specifically incorporate this waiver?			
2. Does the permit identify the physical location where monitoring is to be performed for each outfall?	X		
3. Does the permit require at least annual influent monitoring for BOD (or BOD alternative) and TSS to assess compliance with applicable percent removal requirements?		X	
4. Does the permit require testing for Whole Effluent Toxicity?		X	

II.F. Special Conditions	Yes	No	N/A
1. Does the permit include appropriate biosolids use/disposal requirements?	X		
2. Does the permit include appropriate storm water program requirements?			X

II.F. Special Conditions – cont.	Yes	No	N/A
3. If the permit contains compliance schedule(s), are they consistent with statutory and regulatory deadlines and requirements?			X
4. Are other special conditions (e.g., ambient sampling, mixing studies, TIE/TRE, BMPs, special studies) consistent with CWA and NPDES regulations?	X		
5. Does the permit allow/authorize discharge of sanitary sewage from points other than the POTW outfall(s) or CSO outfalls [i.e., Sanitary Sewer Overflows (SSOs) or treatment plant bypasses]?		X	
6. Does the permit authorize discharges from Combined Sewer Overflows (CSOs)?		X	
a. Does the permit require implementation of the "Nine Minimum Controls"?			X
b. Does the permit require development and implementation of a "Long Term Control Plan"?			X
c. Does the permit require monitoring and reporting for CSO events?			X
7. Does the permit include appropriate Pretreatment Program requirements?			X

II.G. Standard Conditions	Yes	No	N/A
1. Does the **permit** contain all 40 CFR 122.41 standard conditions or the State equivalent (or more stringent) conditions?	X		

List of Standard Conditions – 40 CFR 122.41

Duty to comply
Duty to reapply
Need to halt or reduce activity not a defense
Duty to mitigate
Proper O & M
Permit actions
Property rights
Duty to provide information
Inspections and entry
Monitoring and records
Signatory requirement
Bypass
Upset
Reporting Requirements
Planned change
Anticipated noncompliance
Transfers
Monitoring reports
Compliance schedules
24-Hour reporting
Other non-compliance

2. Does the permit contain the additional standard condition (or the State equivalent or more stringent conditions) for POTWs regarding notification of new introduction of pollutants and new industrial users [40 CFR 122.42(b)]?	X		

Part III. Signature Page

Based on a review of the data and other information submitted by the permit applicant, and the draft permit and other administrative records generated by the Department/Division and/or made available to the Department/Division, the information provided on this checklist is accurate and complete, to the best of my knowledge.

Name	Fred M. Wyatt
Title	Environmental Engineer Sr.
Signature	Date	01/28/2009
